## NuShield Screen Protectors

### Gift Guide Pick

**Your Best Defense  
Against Glare and  
Screen Damage**

NuShield makes great screen protectors for all sizes and styles of your electronic devices. Perfect for all the lcd and touch screen gadgets you own, they also have a DayVue screen protector film that reduces glare on LCD displays in

sunlight.

The DayVue antireflective film allows users to see the LCD screen outdoors. The film retains the scratch resistance that you expect from NuShield and in addition, you can now read your LCD display when using your device outside. It even works when the user wears polarized sunglasses.

I received a DayVue screen protector for my Sony PRS600 E-reader. Because the PRS600 has a touch screen, even though it has an e-ink display, it isn't an "outside" friendly device. You really have shift your reader into a certain position, otherwise you tend to get glare on it. This is the one downside to touch screen and LCD display e-readers.

After I applied the [DayVue screen protector](#) on my PRS600, I took it outdoors to see if it made a difference. While I still receive a 'reflection' off of it (if you hold it up you can see yourself in it), no matter what angle I hold it at, I can see the screen clearly. The DayVue NuShield, works magnificently, and I no longer have to leave my e-reader at home when heading outdoors, or shade it from the sunlight in order to read the screen!

## 2010 Gift Guide

Starting November 1st

It's simple to apply a NuShield screen protector. It's always a good idea to begin with clean hands, and on a clean surface. Check to see that your device is clean as well, that there is no dirt, dust or finger prints on it.

The DayVue antireflective film is masked on both sides. There is a colored mask, which is your top surface, and a clear mask, which covers the bottom side, which adheres to your screen. Remove the clear mask over the tacky side first, and then position it at the screen edge, gently adhere it to the screen a bit at a time, making sure that the air bubbles are pushed from the center to the edges. Keep doing that until the entire shield is adhered to the screen. When you are happy with the placement, simply lift the colored mask off the top, and you are good to go!

Hook up your homies and relatives with a DayVue screen protector this Christmas you can save 10% on purchases at [www.nushield.com](http://www.nushield.com) with the following discount code **KPR%10** (case sensitive). Insert that code on the NuShield buy page. If you don't know what device your recipients own, get them a gift certificate to fill their stocking, so they can purchase the right one!

"Disclosure of Material Connection: I received one or more of the products or services mentioned above for free in the hope that I would mention it on my blog. This post uses affiliate links"

I'd love this for my computer screen. When the afternoon rolls around, I get such a glare on my screen. Thanks for the review.

I didn't know they made these for computer screens! I have something similar for my LG touch. Can you purchase these online or in stores?
